

Skylark Drones - Technical Decision Log

Assignment: Founder Business Intelligence Agent | Length: 2 Pages Max

1. Key Assumptions Made

- a) Energy Sector Taxonomy:** Standardized and merged *Renewables* (111 deals) and *Powerline* (26 deals) into Energy (Renewables & Power) while maintaining sub-sector drilldown capability.
- b) Financial Imputations & Missing Data:** Deals lacking explicit deal value (181 deals) are excluded from sum totals unless estimated. Risk-weighted pipeline is computed via *Masked Deal Value x Closure Probability*. Incomplete dates fall back gracefully (Actual Close Date -> Tentative Close Date -> Created Date).
- c) Operational Revenue Leakage:** Defined as Work Orders with Execution Status = Completed / Partially Completed where Billing Status is not Billed and unbilled balance > 0.

2. Technical Trade-offs Chosen & Rationale

Decision	Option Chosen	Rationale & Trade-off
Monday.com Integration	Hybrid Live GraphQL API + Ingested Dynamic Boards	Supports live api.monday.com/v2 GraphQL API while enabling 100% immediate testability without requiring evaluator API key.
NL BI Architecture	Intent Classifier + Deterministic Calculation Engine	Guarantees 100% financial mathematical precision for founder metrics, preventing LLM hallucinations on revenue/receivables.
State & Storage	Client-side Reactive Memory + Dynamic JSON Ingestion	Reduces latency, guarantees sub-second query responses, and enables zero-dependency hosting.

3. Interpretation of 'Leadership Updates'

Founders spend hours translating raw operational tables into executive slide decks for weekly C-suite syncs. We built a dedicated **Leadership Update Generator** featuring:

- **Slide Carousel Presentation Mode:** Ready-to-present slide deck summarizing revenue, sector focus, and operational risks.
- **Actionable Financial Risk Callouts:** Instant flagging of unbilled execution balance and stalled high-value deals.
- **Multi-Format Exports:** 1-click PDF Report Export and copyable Markdown for email/Slack briefings.

4. What We Would Do Differently With More Time

1. **Monday.com Real-time Webhooks:** Implement webhooks to refresh BI analytics automatically on item changes.
2. **Predictive Revenue Forecasting:** Build Monte Carlo probabilistic models incorporating historical win rates.
3. **Automated Push Alerts:** Send Slack/Teams alerts when unbilled execution balance exceeds Rs. 50 Lakhs.
